1.0 INTRODUCTION

Applied EcoSystems, Inc. (Æ) completed the additional site investigations at the RACER Trust Flint West Industrial Land - #12990 Site between April 25 and April 30, 2013 as outlined in the February 12, 2013 Data Report submitted to The United States Environmental Protection Agency (USEPA).

The Site consists of approximately five acres of land located west of Stevens Street and north of Glenwood Avenue in Flint, Genesee County, Michigan. The Site is developed with a Consumers Energy electrical substation in the central portion. Almost the entire Site consists of concrete pavement, remaining after the demolition of a former manufacturing building. The majority of the Site is secured with a locked chain-link fence.

The exceptions to the approved USEPA Scope of Work are as follows:

- Borehole groundwater samples were not collected. Temporary well screens did not produce sufficient groundwater to properly develop and sample the wells using low-flow methods;
- In December 2012, MW-106S was installed at the southeast corner of the Site. The well did not produce sufficient groundwater for sampling. The January 13, 2013 Data Report indicated that a replacement well would be installed in this location. On April 25, 2013, Æ removed the casing and screen from the existing MW-106S, overdrilled the borehole, and installed the well two feet deeper than before. The well produced sufficient sample volume for development and analysis. Therefore, the well was named MW-106SR, and another replacement well was not installed;
- Some boring locations were revised slightly due to limited accessibility to Geoprobe drilling equipment (due to differing concrete slab elevations). In addition, the February 13, 2013 map indicated a proposed well northwest of the utility substation and another well near the MW-110S location. These two well locations were presented on the map in what were intended as approximate locations but were inadvertently not discussed in the text of the report. The intention was to install the wells after receipt of the analytical results from the soils investigation and groundwater sampling. The wells are scheduled to be installed by July 16, 2013 and sampled during the August, 2013 groundwater monitoring event;
- Investigations (including installation of two monitoring wells) were proposed for the City of Flint former “Chevy-in-the-Hole” site to the north. The investigations were not completed because the City of Flint has not yet granted access;

- The groundwater samples were proposed to be analyzed for 10 Michigan Department of Environmental Quality (MDEQ) metals in addition to Volatile Organic Compounds (VOCs) and Polynuclear Aromatic Compounds (PNAs). Arising from the fact that copper and zinc were not previously found at levels of concern on-site, and subsequent discussions regarding eliminating these metals, AE mistakenly submitted the groundwater samples only for RCRA 8 metals analysis. This error was not discovered until after the laboratory disposed of the samples. Future analysis will include the proposed/approved Michigan 10 metals;
- The survey was not completed. Field to Finish has been unable to obtain benchmark information from the City of Flint. Interim financial management staff has not allowed access to the necessary historical engineering records. Field to Finish expects access to the needed records by July 1, 2013. Alternatively, Field to Finish indicated that other area engineering companies would be contacted in an attempt to collect the necessary USGS datum benchmark information.

2.0 INVESTIGATION ACTIVITIES COMPLETED

Administrative Matters

- Began process to obtain access to the City of Flint property to the north, commonly known as "Chevy-in-the-Hole" for the installation of two monitoring wells.

Soil Borings/Sampling (Task 1 - Former Chrome Plater and AOC3 and Task 2 – Former TCE Degreaser Unit)

- Completed five soil borings and collected seven soil samples for VOCs analysis as proposed in the February, 2013 Data Report.

Well Installation and Abandonment (Task 1 - Former Chrome Plater and AOC3 and Task 2 – Former TCE Degreaser Unit)

- MW106S was overdrilled, the screen was set two feet deeper, and the well was developed. Therefore, the well was named MW-106SR, and another replacement well was not installed.

Groundwater Monitoring (Task 6)

- All wells were gauged. No NAPL was encountered.
- All wells were sampled. Samples were analyzed for VOCs, PNAs, and 8 RCRA metals. Analytical results are attached.

3.0 INVESTIGATION RESULTS

Comparison of soil and groundwater data to current Michigan Department of Environmental Quality (MDEQ) Generic Residential and Non-Residential Cleanup Criteria (GRCC/GNRCC) indicates the following:

Groundwater Results

Metals: Selenium and arsenic were detected above the Groundwater to Surface Water Interface (GSI) criteria, and arsenic was detected above the Drinking Water Protection (DWP). No other criteria were exceeded. The metals concentrations are consistent with expected regional conditions, do not appear to represent a plume, and are believed to be naturally-occurring. Although the MDEQ has published state-wide and regional “background” concentrations for soils, there are no such values published for groundwater. The concentrations of arsenic and selenium are generally consistent with concentrations encountered by AE at other uncontaminated sites in the Flint area. Although low-flow sample collection techniques were properly used, the possibility also exists that the metals concentrations are a result of sample turbidity.

PNAs: No polynuclear aromatics (PNAs) were detected above GRCC or GNRCC.

VOCs: (VOCs comparison includes the updated criteria published by the MDEQ on September 28, 2012). Only Vinyl Chloride (17ppb in MW-109S, located off-site to the north)) exceeded the GSI criteria. The GSI protection criterion for vinyl chloride is 13ppb. This well is located approximately 640 feet from the Flint River. GSI is not believed to be at risk due to the distance to the Flint River and the low concentration of vinyl chloride encountered. This vinyl chloride concentration is also greater than the DWP criterion of 2.0ppb. In addition, trichloroethene was detected in MW-109S at 178ppb, exceeding the DWP criterion of 5.0ppb. Trichloroethene was also detected at 9.0ppb in MW-107S. No other criteria were exceeded. A substantial decrease in VOCs was encountered in MW-111S compared to the previous sampling event. This was the second sampling of this well. Future consideration will be given to this matter if anomalous results are encountered.

Soils Results

VOCs: Various CVOCs and naphthalene were detected in several borings above the DWP and/or GSI criteria. Trichloroethene was detected above some inhalation criteria as follows:

Soil (parts per billion)						
Analyte	Res. Vol. to Indoor Air	Res. Vol. to Ambient Air – Infinite Source Thickness	Res. Vol. to Ambient Air – 5m Source Thickness	Non-Res. Vol. to Indoor Air	Non-Res. Vol. to Ambient Air – Infinite Source Thickness	Non-Res. Vol. to Ambient Air – 5m Source Thickness
Trichloroethene	1,000	11,000	25,000	1,900	14,000	25,000

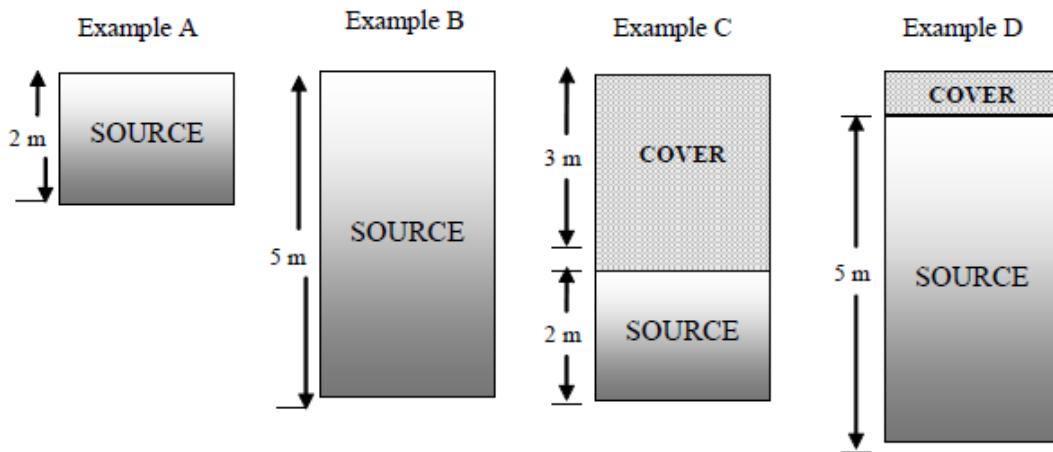

Trichloroethene was identified in soils at three locations (including past investigations) above one or more of the above volatilization criteria. As follows:

Analyte	Location	Results (ppb)	Inhalation Criteria Exceeded
Trichloroethene	SB-114 (20'-21')	1,220	Only Residential Indoor Air
	SB-117 (18'-19')	5,980	Residential and Non-Residential Indoor Air
	SB-122 (15'-16')	14,400	Residential and Non-Residential Indoor Air, Residential Ambient Air (Infinite Source), Non-Residential Ambient Air (Infinite Source)

Based on current and past investigations, the area of CVOCs above inhalation criteria is limited in extent and not near any buildings. Based on proximate past sampling and site observations (including photoionization detector (PID) readings); no areas of VOC impacts in soils are greater than 5 meters in thickness. This evaluation is consistent with the MDEQ's guidance provided in Operational Memorandum Number 1, Attachment 7, *Technical Support Document - Attachment 7 - Part 201 Generic Soil Inhalation Criteria For Ambient Air, Part 213 Tier I Soil Inhalation Risk-Based Screening Levels For Ambient Air*.

Attachment 7 states: "These criteria (Finite Source) modified for source area size, may be applied where characterization of the vertical extent of soil contamination is adequate and the vertical extent (i.e., source thickness, ds) of the contaminant source is no greater than the 2 and 5 meter source thickness assumed for these scenarios. Finite source VSIC may be used to determine the need for a response action to address soil contamination or to verify the adequacy of soil remediation when the soil-to-ambient air pathway is the most restrictive and relevant pathway."

This evaluation is assisted in the document using a graphical illustration of example scenarios, as follows:

Figure 1: Finite Source VSIC and Source Thickness

The RACER Flint West scenario is consistent with the “Example D.” Therefore, the indoor air and infinite source ambient air protection criteria do not apply, and a vapor intrusion concern is not indicated.

Sample analytical results (tabulated results and reports) are attached. Figures 2 and 3 illustrate the GSI and drinking water exceedances, respectively. Soil exceedances are shown on Figure 3.

Data validation information is expected by July 1, 2013.

4.0 PROPOSED ADDITIONAL INVESTIGATIONS

Proposed additional investigations are as follows:

1. Survey new sample locations.
2. Conduct gauging/sampling of the existing monitoring wells. The proposed analytical parameters for groundwater samples are:
 - 10 MDEQ metals: - Based on past low turbidity conditions, it is expected that low-flow sampling and total metals analysis is appropriate. (Past sampling has not required sample filtration);
 - PNAs (EPA 8270); and
 - VOCs (EPA 8260).

3. Conduct two soil borings and install one monitoring well to the north/northwest of SB-122. The SB-122 location represents the highest CVOC concentration in soils. Install a second well northwest of SB-122. The off-site wells are intended to evaluate the extent of the impact and to determine if the CVOC soil impact is a long-term threat to the GSI.
4. Install off-site wells per approved plan within 30 days of finalized Access Agreement with the City.

5.0 PROPOSED SCHEDULE:

Two additional wells will be installed (northwest of the utility substation and downgradient from SB-122) by July 14, 2013 and sampled during the August 2013 monitoring event.

Two additional wells will be installed on the City of Flint-owned property to the north within 30 days of receipt of a finalized Access Agreement.

Field work for the summer 2013 groundwater monitoring event is expected to be completed in August 2013 and a Data Report submitted approximately October 1, 2013.

Drill Date: 12/10/2012

SUBSURFACE PROFILE			SAMPLE	Photoionization Detector (PID)
Depth	Description	USCS Classification	Depth	Recovery (inch)
16	GP Sand, fine; rounded; poorly sorted; moist; gray (5Y4/1)			0.0
17	GP Sand, fine; rounded; poorly sorted; saturated; gray (5Y4/1)			0.0
18				0.0
20	CL Clay, some silt; medium plasticity; dry; gray (5Y4/1)		(20-21)	0.0
22	End of Log			0.0
24				0.0
26				0.0
28				0.0

The figure displays a vertical profile of the subsurface. The left side shows depth in inches from 16 to 28. The middle section contains descriptions and USCS classifications for each layer. The right side shows recovery in inches from 0 to 50, with a series of green dots representing data points. A horizontal dashed line at the 96/60 mark indicates the end of the log.

NOTES:

- Exceeds one or more criteria
- G Groundwater to Surface Water Interface Criteria - calculated based on 257ppm total hardness in the Flint River
- Blank cells indicate no detectable concentrations
- 1.00 Compound also found in associated method blank, suggesting a laboratory artifact.
- NC Insufficient data to develop criterion/no criterion

SOIL ANALYTICAL DATA - DETECTED VOCs
RACER - Flint West #12990

Report Summary

Lab Sample ID(s): S56230.01-S56230.17

Project: 12990-11-01/ Former Building 9

Collected Date: 04/25/2013 - 04/26/2013

Submitted Date/Time: 04/29/2013 08:00

Sampled by: Josh Adams

P.O. #: 11-4317-102

MDL's added

Report Notes

Results relate only to items tested as received by the laboratory.

Methods may be modified for improved performance.

Results reported on a dry weight basis where applicable.

'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).

Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.

Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc..

Laboratory Certifications:

Michigan DNRE (#9956), DOD/ISO 17025 (#69699), WBENC (#2005110032), Ohio EPA (#CL0002), IN Drinking Water (#C-MI-07), NELAC NY (#11814)

Some analytes reported may not be certified. Full certification lists are available upon request.

A handwritten signature in black ink that reads "Violetta F. Murshak".

Report Summary

Lab Sample ID(s): S56254.01-S56254.10
Project: 12990-11-01/ Former Building 9-Delphi
Collected Date: 04/30/2013
Submitted Date/Time: 05/01/2013 08:41
Sampled by: Josh Adams
P.O. #: 11-4317-102

Report Notes

Results relate only to items tested as received by the laboratory.
Methods may be modified for improved performance.
Results reported on a dry weight basis where applicable.
'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).
Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.
Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc..

Laboratory Certifications:

Michigan DNRE (#9956), DOD/ISO 17025 (#69699), WBENC (#2005110032), Ohio EPA (#CL0002), IN Drinking Water (#C-MI-07), NELAC NY (#11814)
Some analytes reported may not be certified. Full certification lists are available upon request.

A handwritten signature in black ink that reads "Violetta F. Murshak".

Report Summary

Lab Sample ID(s): S56255.01-S56255.04

Project: 12990-11-01/ Former Building 9-Delphi

Collected Date: 04/30/2013

Submitted Date/Time: 05/01/2013 08:41

Sampled by: Josh Adams

P.O. #: 11-4317-102

MDL's added to the report

Report Notes

Results relate only to items tested as received by the laboratory.

Methods may be modified for improved performance.

Results reported on a dry weight basis where applicable.

'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).

Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.

Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc..

Laboratory Certifications:

Michigan DNRE (#9956), DOD/ISO 17025 (#69699), WBENC (#2005110032), Ohio EPA (#CL0002), IN Drinking Water (#C-MI-07), NELAC NY (#11814)

Some analytes reported may not be certified. Full certification lists are available upon request.

A handwritten signature in black ink that reads "Violetta F. Murshak".
